Pack of canned fishery products, 1951-72 13

Source of data:--Since 1921, the National Marine Fisheries Service of the National Oceanic and Atmospheric Administration and its predecessor organizations have made annual surveys for statistics on the domestic production of canned fishery products. The data collected include statistics on the production and value of each canned commodity by can size and trade classifications. The value shown for the products constitutes the gross amount received by the producer at the production point; no deductions are made for commission or expenses. Statistics on the Alaska canned pack were furnished by the Alaska Department of Fish and Game.

REVIEW

The 1972 pack of canned fishery products in the United States, American Samoa, and Puerto Rico was a record both in quantity and value at 56.5 million standard cases (1.6 billion pounds) with a value of $989.3 million to the canning companies. Compared with 1971, this was an increase of about 10.5 million cases (236.4 million pounds) and $218.7 million. There were record packs of tuna, animal (pet) food, and clam chowder and larger packs of Maine sardines, tunalike fishes, and shrimp. The canned packs of salmon, mackerel, alewives, crab meat, and fish roe and caviar, however, were less than in 1971.

The pack for human consumption (916.4 million pounds) was 100.1 million pounds more than in 1971, while the amount packed for bait and animal (pet) food increased 136.3 million pounds. Five items--salmon, tuna, shrimp, clam products, and animal (pet) food--accounted for 92.9 percent of the total value of all canned fishery products. The pack of animal (pet) food containing less than 10 pounds of fish per standard case was 3.6 million standard cases valued at $22.4 million; these data are not included in statistics on the total U.S. production of canned fishery products.

Salmon. Pacific salmon landings during 1972 of 216.7 million pounds valued at $62.8 million were down 95.4 million pounds and $15.0 million. The 1972 pack of canned salmon of approximately 1.8 million cases was down about 1.7 million cases, or 49 percent, from 1971 and was among the lowest packs in this century. Major developments during the 1972 season were: The Bristol Bay red salmon pack was 201,700 cases, only 30 percent of the 1971 pack and the lowest since 1900. The Alaska pink salmon pack of only 538,111 was 40 percent of the 1970 cycle year pack of 1,328,532 cases and the second smallest pack this century. As a result of near record low Alaska pink and red salmon packs, the producers raised their wholesale prices for these items by about $7.00 and $10.00 per case respectively.

Tuna. The 1972 pack of tuna, 31.1 million standard cases (616.6 million pounds) valued at $632.5 million, set new records both in quantity and value. The pack exceeded that in 1971 by 8.8 million standard cases and more than $219 million. Production in all regions increased by significant amounts. The Pacific Coast led in production with 48 percent of the total, followed by Puerto Rico with 37; American Samoa, Hawaii, and Maryland comprised the remainder.

The United States imported a record 764.8 million pounds of tuna (round weight), including foreign landings at American Samoa, in 1972 compared with 506.6 million pounds in 1971. In 1972, U.S. packers produced 92 percent of the total supply of canned tuna.

Sardines. The 1972 pack of sardines (sea herring) totaled 1.6 million standard cases (36.6 million pounds) valued at $23.9 million. Compared with 1971, this was an increase of 612,000 cases and $13.0 million in value.

Shrimp. The 1972 pack of shrimp was 3.5 million standard cases, 215,000 more than the pack in 1971 but 197,000 less than the record pack in 1970. The value of the pack ($41.8 million) exceeded the previous year's value by $8.2 million. Canned production in Louisiana and Mississippi was 2.2 million standard cases, while Washington, Oregon, and Alaska produced 1.3 million cases.

Clams. The pack of clams and clam products was a record volume for 1972. Over 2.7 million standard cases valued at $26.0 million was produced. The pack of whole and minced clams (624,776 standard cases valued at $8.4 million) was 9,675 cases and $1.4 million less than 1971. However, the production of chowder and juice (2.1 million cases) was 36,251 cases and $1.1 million greater than in 1971.

SUMMARY OF PRODUCTION, BY PRODUCTS, 1972
